**accuracy 0.5 %**

**standard output:** 4...20 mA; 2-wire-system  
oder 0...5 VDC; 3-wire-system  
oder 0...10 VDC; 3-wire-system

## Description

Pressure sensors for highest pressures are top of the range pressure transducers.

Due to the flexible construction of both the electrical and the mechanical connections the pressure sensor model 3399 is the perfect choice in the field of highest pressure measurement. Reliability, safety, resistance to corrosion and high mechanical load make them suitable for all highest pressure measuring tasks.

The measuring ranges range from 0...2500 bar to the maximum pressure range of 0...8000 bar. The case and wetted parts comprise stainless steel and are thus resistant to chemically aggressive media. The pressure connection and measuring element are uptightened via a metall cone. Therefore there is no risk of leakage in the welding seams.

A relief bore ensures a defined escape for the media in direction of the pressure connection in case of a damage.

Plugs according to DIN EN 175301-803 form a, 4-pin round connectors M12x1 or cable outlets are used to pick up the electrical output signals.

The pressure sensors for highest pressures meet the electronic magnetic compatibility (EMC) requirements to EN 61326.

## Features

- high mechanical load rating
- high peak pressure resistance
- high alternating load resistance
- high long-term stability
- corrosion resistant stainless steel design
- mechanical safety conception
- for dynamic and static measurements

## Measuring ranges

Gauge pressure	
positive	0...2500 bar bis 0...8000 bar

## Applications

Hydraulic presses,  
compressors for high and highest pressures,  
machine tools,  
test machinery

**Model: P3399**
